PK-001		"PK-001" The construction consists of three vertical columns and two crossbars. The length of crossbars is 1200mm and 1758mm. Construction is secured together with aluminium clamps. Weight-37.30kg	515.66	
PK-002		"PK-002" The construction consists of six vertical columns and five crossbars. The length of crossbars is: 2 pieces-1200mm in length, 3 pieces-1758mm in length. Construction is secured together with aluminium clamps. Weight-82.00kg	1203.60	
PK-003		"PK-003" The construction consists of nine vertical columns of different heights and fifteen crossbars 1758mm in length. Construction is secured together with aluminium clamps at the height that corresponds to the wishes of the Client. Weight-325.60kg	3804.32	
PK-004		"PK-004" The construction consists of three vertical columns and two different height wooden wall sections. Each of the walls is mounted on two crossbars 1200mm in length. Height of the wall-1050mm and 1650mm. Construction is secured together with aluminium clamps. Weight-287.50kg	2260.88	
PK-005		"PK-005" The construction consists of three vertical columns and two wooden wall sections. Each of the walls is mounted on two crossbars 1200mm in length. Height of the walls 1650mm. Construction is secured together with aluminium clamps. Weight-329.30kg	2351.74	

PK-006		<p>"PK-006" The construction consists of six vertical columns with different heights, wooden wall section and five crossbars 1758 mm in length. The wall is mounted on two crossbars 1200 mm in length. Height of the wall is 1650 mm. Construction is secured together with aluminium clamps at the height that corresponds to the wishes of the Client. Weight – 349.00 kg</p>	2840.26	
PK-007		<p>"PK-007" The construction consists of one curved bar. The upper horizontal surface of the bars is 1650 mm long. Bar is symmetrically curved at the angle of 90 degrees and created the construction at the height of 300 mm from the foundations. Weight – 15.00 kg</p>	212.40	
PK-008		<p>"PK-008" The construction consists of one curved bar. The upper horizontal surface of the bars is 1650 mm long. Bar is symmetrically curved at the angle of 90 degrees and created the construction at the height of 1200 mm from the foundations. Weight – 26.00 kg</p>	259.60	
PK-009		<p>"PK-009" The construction consists of twelve vertical columns, two different height wooden wall sections, one crossbar 1200 mm in length and ten crossbars 1758 mm in length. The wall is mounted on two crossbars 1200 mm in length. Height of the walls is 1050 mm and 1650 mm. Construction is secured together with aluminium clamps at the height that corresponds to the wishes of the Client. Weight – 675.20 kg</p>	5803.24	
PK-010		<p>"PK-010" The construction consists of nine vertical columns with different heights and eleven crossbars 1758 mm in length. Construction is secured together with aluminium clamps at the height that corresponds to the wishes of the Client. Weight – 358.90 kg</p>	3420.82	

<p>PK-011</p>		<p>"PK-011" The construction consists of twelve vertical columns with different heights and fifteen crossbars 1758mm in length. Construction is secured together with aluminium clamps at the height that corresponds to the wishes of the Client. Weight - 484.50kg</p>	<p>4633.86</p>	
<p>PK-012</p>		<p>"PK-012" The construction consists of eight vertical columns of different heights, six crossbars 500mm in length, supporting a set of wooden benches. The length of each bench is 1650mm. All elements of the construction are secured together with aluminium clamps at the height that corresponds to the wishes of the Client. Weight - 270.80kg.</p>	<p>2334.04</p>	
<p>PRICE: The specified prices are denoted for the construction that have the original Kenguru Propowder paint RAL7016 and RAL2004 for the clamps. Other RAL colours are available, if needed. The cost for constructions in other colours will be added to the final account individually. There is no extra cost for other colors for the clamps. The specified price does not include shipping cost. Shipping cost will be calculated for each order individually. The items will be shipped from Riga, Latvia.</p> <p>TECHNICAL PART: Column - steel pipe with a diameter of 108mm, thickness of wall not less than 3.2mm. Crossbar - steel pipe with a diameter of 34mm, thickness of wall not less than 3.2mm. Crossbars and sections have installation holes under bolts M10. Clamp - aluminium clamp for crossbar section fixation on vertical column. Clamp consists of two different pieces - one with holes, second with M10 threads and is tightened with two security bolts M10. All vertical columns have plastic elliptical caps.</p>
